

Optimizing at MAMMEN Dairies A/S

- molded PUR pipe insulation with food-grade surface, for optimizing both quality and work environment!

"We wanted to insulate the pipes, especially in our production area, to prevent temperature fluctuations and to avoid condensation dripping onto our products. This was not only a matter of quality but also energy," Technical Manager at MAMMEN Peter Bech Sandahl explains.

MAMMEN Dairies A/S, in collaboration with Dmois A/S, has optimized both its production environment and product quality by installing Dan-isoCLEAN – a molded PUR pipe insulation with a food-grade surface.

Economic benefits and responsibility

"We've noticed a significant difference. There are no longer the same temperature fluctuations, and this has had a positive effect on our working conditions. We now have a more stable and tempered environment, which is exactly what we wanted," Peter Bech Sandahl, Technical Manager at MAMMEN Dairies A/S explains.

"Additionally, cleaning has become easier. The food-grade surface has made it possible to keep the pipe insulation free from bacteria, while also withstanding the strong chemicals

used in the cleaning process. We clean with powerful chemicals, and the pipe insulation has held up without any issues,” Peter Bech Sandahl adds.

Download the CASE below where owner Jan Bruun from Dmois also comments on the project.

Effective insulation of external heat pump pipes

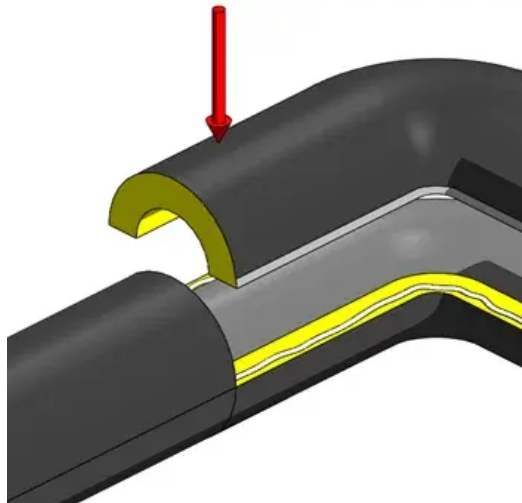

- with robust UV-protective and weather-resistant coating

By using molded and UV-coated PUR pipe shells, you achieve effective and durable insulation for your heat pump's outdoor pipes.

This solution eliminates challenges associated with temperature requirements for spray foam and ensures consistent insulation that improves the system's energy efficiency.

An investment that benefits both the environment and your wallet in the long run.

Contact us

If you have questions about specific insulation solutions, materials or need advice, please contact us.

-
- Highly efficient insulation materials
 - PUR approved according to EN 253
 - Insulation capacity more than 30% better than other insulation types
 - Recycling with PurRECY
 - Insulation solution for low toxicity applications EU Directive 2011/10/EC
 - PIR block foam "Euroclass E" fire test EN-ISO 11925-2

We deliver tailor-made solutions for the insulation industry with a focus on quality and innovation. Through close cooperation with our customers and a flexible approach, we ensure efficient products that optimize energy consumption.
